About Dr. Jeffrey Jones, MD MPH: Pioneering Travel Medicine Excellence

Dr. Jeffrey Jones leads a renowned travel clinic at a major Indianapolis hospital, bringing three decades of expertise in internal medicine and tropical infectious diseases.

His practice serves both outbound travelers and returning patients while providing critical guidance to infectious disease experts and hospital infection control teams.

Beyond clinical care, Dr. Jones trains medical students and residents in global health, collaborating with NGOs to support volunteers in remote locations.

Elevating Clinical Excellence in Travel Medicine

“GIDEON’s differential diagnosis tools can be especially powerful.”

Advanced Diagnostics

Dr. Jones manages complex clinical scenarios with GIDEON. The platform's sophisticated differential diagnosis tools are crucial for challenging cases.

"These tools are especially powerful when patients return from West African trips with symptoms that could be run-of-mill pharyngitis or Lassa fever," Dr. Jones explains.

Education and Patient Engagement

Dr. Jones uses GIDEON's data to develop educational materials and improve patient compliance. His evidence-based approach, supported by country-specific vaccination data, has notably improved vaccine acceptance rates.

"If these countries, with low resources, are making the effort to vaccine against Disease X then you should take the risk of infection seriously and also take the vaccine," he tells his patients.

International Patient Care

For international patients, GIDEON's vaccine database has transformed care delivery.

"GIDEON's listing of different names for vaccines has been a game changer in assisting with accurate appraisal of vaccination histories," says Dr. Jones, highlighting its value for refugee and immigrant care.

The GIDEON Advantage

Advanced differential diagnosis tools

State-of-the-art differential diagnosis (DDx) capabilities trusted by leading medical centers worldwide for fast, precise clinical decisions.

Latest infectious disease intelligence, updated daily

GIDEON's expert team provides current information on outbreaks, diseases, vaccines, and medications in a user-friendly format.

Interactive platform to compare infectious diseases

Interactive comparison tools enable detailed analysis of symptoms, treatments, and characteristics across 3,000+ pathogens and 370+ infectious diseases.

Data Visualization Toolkit

Global disease surveillance through interactive mapping tools, featuring outbreaks and vaccination coverage worldwide.
